Editorial Preface

Welcome to **KOMPUTIKA**, July 2026 Issue (Vol. 2, No. 1).

This issue reflects the diverse ways in which computer science and information technology continue to influence research, education, industry, healthcare, and society. The articles featured in this edition demonstrate that technological innovation is no longer confined to laboratories or software development—it increasingly serves as a catalyst for improving lives, strengthening communities, and addressing real-world challenges.

Several contributions explore the rapidly evolving landscape of artificial intelligence, including its applications in software engineering, education, recommendation systems, cybersecurity, healthcare, and digital research. Collectively, these articles highlight both the opportunities and responsibilities that accompany intelligent technologies, emphasizing the importance of ethical implementation, human-centered design, and evidence-based decision-making.

This issue also celebrates research that extends beyond technological advancement to create meaningful societal impact. Readers will discover inspiring work on assistive technologies that empower individuals with autism, innovative approaches to digital learning, workforce development through Occupational Frameworks, community-based cybersecurity awareness, and international collaborations that strengthen knowledge exchange across borders. Together, these contributions demonstrate how computing research can foster inclusion, accessibility, lifelong learning, and sustainable development.

In addition to research and innovation, **KOMPUTIKA** continues to celebrate the vibrant academic community within the Faculty of Computer Science and Information Technology. This issue captures memorable faculty activities, international engagement, student and researcher experiences, and collaborative initiatives that enrich our academic ecosystem while reinforcing the spirit of collegiality and lifelong learning.

As Editor, I extend my sincere appreciation to all authors, reviewers, editors, and contributors whose dedication has made this publication possible. Their willingness to share knowledge and experiences continues to strengthen our scholarly community and inspire future collaborations.

I hope this issue provides informative reading, stimulates new ideas, and encourages readers to explore how computing can continue to create positive impact for individuals, organisations, and society.

Dr. Raja Jamilah Raja Yusof

Editor in Chief
